

Kerneil Rommel S. Gocotano

Software Developer & Systems Integrator

 GitHub: github.com/SkieAdmin

Professional Summary

IT Graduate and Full-Stack Developer specializing in secure backend infrastructure, modern web applications, and AI-integrated systems. Highly proficient in C#, NodeJS, and React, with a strong foundation in Linux system administration. Known for leveraging advanced AI development tooling (Claude-Code and etc) to drastically accelerate development cycles, write robust logic, and deploy scalable solutions efficiently from the web down to embedded hardware.

Technical & Engineering Skills

- **Languages & Frameworks:** C# (.NET, WinForms, WPF), Python (Django), JavaScript (Node.js, React), PHP, C++, Lua
- **Infrastructure & Security:** Advanced Linux System Administration, Cybersecurity Operations, Cloud Fundamentals (Azure)
- **AI Tooling & Automation:** VS Code AI Integration (Claude Extension), Claude-Code, DeepSeek, Model Context Protocol (MCP) Orchestration
- **Hardware & Embedded:** Hardware Prototyping, Arduino-based Embedded Systems, IoT Integration

Engineered Systems & Key Projects

PandaAuth System

Website: pandadevelopment.net | *Backend Infrastructure Engineer*

- **Core Architecture:** Developed and maintained the server-side infrastructure for an advanced key system authentication platform.
- **Access Management:** Ensured secure integration and validation for client access, licensing, and automated entitlement checks

Clinic Web Application

Full-Stack Developer (Python / Django)

- **Systems Architecture:** Engineered the complete backend infrastructure for a healthcare platform, managing complex database schemas and RESTful APIs using Python and Django.
- **AI-Driven Features:** Modernized the platform by integrating LLM-assisted capabilities and Speech-To-Text APIs, drastically reducing friction in patient record management.
- **Security & Compliance:** Designed robust data handling paradigms and encrypted authentication systems to ensure secure client-server communication.

VeggieScan

Software Engineer (AI/Machine Learning Integration)

- **Core Development:** Developed a visual diagnosis application to detect vegetable freshness and contamination (Using YolloV8) to train images and LLM-Models as suggestion / verdict reason.
- **LLM Architecture:** Powered the core analytical engine using modern Large Language Models, successfully bridging complex AI reasoning with a user-facing web application.

Education & Certifications

Bachelor of Science in Information Technology

St. Michael's College of Iligan Inc. (S.Y. 2022 -2026)

Certifications & Professional Development:

- Microsoft Azure Virtual Training Day: Fundamentals
- DEVCON Iligan Attendee & IT Leadership Representative
